

# November Release: Re-authorization Popup

- **What is occurring:** LinkedIn has standardized its publishing APIs. As a result, Adobe Social users must upgrade their LinkedIn accounts to take advantage of new functionality in future releases of Adobe Social. On 11/5/15, users will see a pop-up message instructing them to upgrade their LinkedIn accounts once a week until they have upgraded all of their accounts.
- **User Experience:** In an effort to make this transition seamless, we have designed a workflow to assist users with going through the re-authorization process. If a user is an Admin for a given LinkedIn account, they will be prompted upon login to go through the reauthorization process. Every 7 days, users will receive a follow-up notification if they still need to take action.
- **Risk:** It is critical that users go through this process so that LinkedIn APIs continue to work after our expected November release. If a property is not re-authorized, users will not be able to publish to the property and LinkedIn data will not be collected.

- **Step 1:** User logs in
- **Step 2:** After logging in, user is served with a re-authorization prompt. To proceed:
  - Locate your LinkedIn account from the list
  - Click the blue Authorize button
  - Login with your LinkedIn credentials. Click Save to complete the process.
  - Click Skip on any LinkedIn profiles that are not yours
- **Step 3:** Click I'm Done to complete the process
